

**Table S. Patient's Naranjo Adverse Reaction Probability Scale**

Question	Yes	No	Do Not Know	Score
Are there previous conclusive reports of this reaction?	+1	0	0	+1
Did the adverse event appear after the suspected drug was administered?	+2	-1	0	+2
Did the adverse reaction improve when the drug was discontinued or a specific antagonist was administered?	+1	0	0	+1
Did the adverse reaction reappear when the drug was readministered?	+2	-1	0	0
Are there alternative causes (other than the drug) that could on their own have caused the reaction?	-1	+2	0	+2
Did the reaction reappear when a placebo was given?	-1	+1	0	0
Was the drug detected in the blood (or other fluids) in concentration known to be toxic?	+1	0	0	0
Was the reaction more severe when the dose was increased, or less severe when the dose was decreased?	+1	0	0	+1
Did the patient have a similar reaction to the same or similar drugs in any previous exposure?	+1	0	0	0
Was the adverse event confirmed by any objective evidence?	+1	0	0	+1
<b>Total Score*</b>				<b>8</b>

\* The ADR was assigned to a probability category from the total score as follows: definite probable 5 to 8, possible 1 to 4, doubtful  $\leq 0$ ; hence, a score of 8 suggests that the adverse reaction is probably due to etanercept.
